To Whom It May Concern,

If you are questioning whether to make a purchase from KidJumpTech, I can reassure you, you will not regret the decision. Their innovative equipment has been a game changer in my classroom! My students are highly engaged every day and love participating in many hands-on activities because of my purchase of an interactive sandbox and interactive table from KidsJumpTech. Not only is the equipment top notch but the customer service is as well!

Two years ago, I purchased an interactive sandbox from KidJumpTech and it has been an awesome experience seeing the students' faces light up when they get to use it. The construction of the frame is made from smooth, durable metal. The sandbox itself is very sturdy, wrapped in a visually appealing decal depending on the theme you choose. The interactive sandbox comes to life by using a motion-sensing scanner detecting the height of sand. By sculpting and manipulating the sand, you can change landscapes. The students are highly engaged as they are able learn about the habitats of different animals or a fossil dig to uncover bones of a T-Rex! They collaborate and work as a team to build a large volcano and watch it erupt. This is an amazing tool for any student as it involves all aspects of learning from tactile, to visual and auditorial.

Exploring and learning in the sand is only half of the excitement with this sandbox. The sandbox can easily be transformed into an interactive table by placing the provided panels on top, covering the sand. This opens the door to over 100+ other software games and activities for students to utilize. Just as with the sand, the projector displays images on the now converted tabletop. Students are actively engaged, whether moving the sand or working on the tabletop. The students love using the versatile sandbox and are highly motivated and excited to be involved in hands-on-learning.

Next, the interactive tv/table I just received from KidsJumpTech is also built with heavy and durable metal which is perfect for my first-grade students. The company customized the table to the exact height I wanted to accommodate my little students. The interactive tv allows you to download apps from Microsoft and Google which opens the door for all kinds of learning opportunities for students. Just receiving this table, I have yet to scratch the surface with all the possibilities it has. I am looking forward to furthering my knowledge with it, but I couldn't be happier with the way it looks and performs so far.

Other than the amazing quality of products, the customer service that this company provides is fantastic as well. On both occasions my products have been delivered personally by one of KidsJumpTech employees, ensuring the safety of all my items! Sakina, head of sales, is always kind and keeps me informed about the products, sends pictures as it is being built, and tells the estimated time of arrivals. She doesn't just email, she calls personally to communicate things as well. She is always friendly and personable telling you to "have a good day!"

I am not a very tech savvy person so getting electronics is nerve racking. However, John the sales manager at KidsJumpTech, is very helpful and connects to your devices remotely to set things up during

a Zoom conference. What would've taken me a long time to do myself, John completed within minutes. Again, John has always been friendly and courteous during our conversations. In our last discussion he explained upcoming products, which means this company has a vision and future. I am excited to see their new inventions and look forward to buying more products from them! If you purchase something from them, I know they will go above and beyond to help you as they have for me! I appreciate all they have done. Thank you KidsJumpTech for incredible products and awesome costumer service!
